Cybersecurity Analyst specializing in threat assessment, vulnerability management, and incident response. Experienced implementing security frameworks (NIST, ISO 27001, MITRE ATT&CK) and automating workflows through SOAR playbooks. Skilled in security monitoring, log analysis, intrusion detection, and developing incident response plans. Proven ability to identify and remediate security weaknesses including misconfigurations, compliance gaps, and access control vulnerabilities. CompTIA Security+ and ISC2 CC certified with experience delivering security awareness training across diverse audiences.

TECHNICAL SKILLS

Security Tools & Frameworks
Threat Analysis & Pentesting
Programming & Scripting
Incident Response

Python, C++, SQL
Web Applications (HTML, JS, Azure)
Collaborative & Team Focused
Detail-Oriented Execution

Threat Assessments
Data Analytics & Visualization
IT Risk Management & Cyber Security
Technical Communication & Writing

WORK EXPERIENCE

Webserves Inc.

Cybersecurity Analyst and Web App Manager

May 2024 – Feb 2026

- Monitored and secured client web applications including WordPress sites, Microsoft 365 portals, and Canva integrations using vulnerability scanning, identifying outdated SSL certificates, exposed admin interfaces, unsecured password reset portals, and insecure data exchange APIs to reduce attack surface.
- Developed Incident Response, Disaster Recovery, and Business Continuity Plans covering phishing attacks and data breaches, establishing procedures for credential compromise, donor data protection, and backup restoration that improved preparedness and reduced recovery times.

Fordham Center for Cybersecurity

Cybersecurity Assistant and Educator

Aug 2022 – May 2024

- Developed and delivered security awareness training with simulated phishing exercises for university staff, improving threat recognition capabilities and reducing phishing incidents across the university.
- Implemented SOAR playbooks to automate incident response for malware detection, unauthorized network access, and data exfiltration alerts, reducing response time and enabling focus on advanced threat analysis.
- Integrated MITRE ATT&CK framework into cybersecurity education and vulnerability assessments, mapping weaknesses to adversary tactics and creating practical scenarios that prepared students to defend against real-world threats.

Fordham Graduate School of Arts and Sciences (GSAS)

Web Development and Marketing Strategies

Oct 2023 – May 2024

- Integrated Google Analytics with web server logs to monitor user behavior patterns including page navigation sequences, geographic locations, session durations, and traffic sources to identify anomalies such as unusual navigation paths and automated bot-like behavior.
- Configured and maintained Terminal4 security settings of webpages, including user role assignments, section-level access controls, and content type permissions to enforce least-privilege principles and prevent unauthorized content modifications.

Fiber-Rex Philippines Inc.

Web Development and Management

April 2020 – April 2021

- Led development of secure company web platforms with authentication, access control, and data protection mechanisms.
- Designed resilient architectures to mitigate identity theft, unauthorized access, and data manipulation risks.
- Conducted ongoing platform monitoring and implemented rapid remediation for potential cyber or fraud incidents.

EDUCATION

M.Sc. Cybersecurity

Fordham University – New York, NY

Aug 2022 – May 2024

B.Sc. Information Technology

Mapúa University – Makati City, Philippines

Aug 2017 – April 2021
